

Horizontal Pressure Filter

Pressure Filtration

Roberts Filter has been designing and manufacturing horizontal pressure filters since the late 1800's. We have over 2000 pressure filter installations, some of which have been in operation for over 100 years. Following is a very small sampling of horizontal pressure filter references. Horizontal pressure filters are especially well suited for the high volume flows required by large municipalities, industries, and power utilities.

The unique Roberts' multi-cell backwash system offers the economy of horizontal pressure filters, without the need for backwash pumps. The largest standard units have more than 500 square feet of filtering area, and can reliably supply plants that treat from 1 to 25 million gallons per day. Roberts' horizontal multi-cell designs partition the unit to form individual filter cells. They can often be used as a cost-effective substitute to multiple vertical units.

Roberts Filter Group
Innovations for Generations

Low Initial and Operating Cost

Roberts Horizontal Pressure Filters offer low initial and operating costs than conventional systems and the package nature of these systems greatly simplifies the design and installation for the engineer and contractor.

Easily Installed and Maintained

Roberts' on-staff chemical engineers understand the variety of water treatment challenges that confront municipal and industrial users. They are experienced in applying our state of the art pressure filtration capabilities to solve the most challenging water treatment problems, at significant cost savings.

Popular Choice For Treatment Of Municipal and Industrial Waters and Wastewaters

Horizontal Pressure Filters are especially well suited for the high volume flows required by large municipalities, industries, and power utilities. The unique Roberts' multi-cell backwash system offers the economy of horizontal pressure filters, without the need for backwash pumps.

Roberts Filter Group
Innovations for Generations

Roberts Filter Group

The Roberts Filter Group is the largest family-owned water filtration company in the U.S. with more than 4,400 installations across six continents. It is a fifth-generation operation that began with one of the world's first patented water filters and has continued to develop pioneering, high-quality filtration products ever since. Today, Roberts continues to work with some of the smartest companies and engineers on the planet to answer the industry's demand for customized, flexible solutions and efficient operations.
